Projects

Williams' Pizza – React, SCSS, Node, Express, MongoDB

Ecommerce website for a fictional pizzeria where users can order their favorite pizzas. [Source](#) [Live Demo](#)

- Provided an admin account for the owner where they can create, edit, or remove any product or discount at any time.
- Implemented a cart system that allows users to see their current order with the total amount.
- Integrated google maps and google sign-in api.
- Utilized image compression to decrease landing page loading time by 200%.
- Applied modern security measures to ensure that private user data is secure.
- Used responsive design techniques to provide a mobile friendly experience.

School Manger – React, Node, Express, MongoDB

Web application that enables students to log their current classes and upcoming assignments. [Source](#) [Live Demo](#)

- Saved user data to a mongodb database.
- Enhanced the user experience by using react-spring to provide fluid animations.

QuezGame – React, Word Api

Gaming website that includes games such as **Tick-Tack-Toe**, **Rock-Paper-Scissors**, a **word guessing game**, and a **text-based adventure game**. [Source](#) [Live Demo](#)

- Connected to the Word Api to enhance the word guessing game by provide new random words every game.
- Employed a dialogue tree for the text-based adventure game.
